Principles and Practice of Maggot Debridement Therapy

Principles & Practice of Maggot Debridement Therapy

Workshop Details:

The BioTherapeutics, Education and Research Foundation produces the Maggot Therapy Workshop series. Begun in 2004, these workshops are now touring the country.

Attendees will learn how, when, and why to use maggot debridement therapy effectively for their patients with non-healing wounds. Participants will have the opportunity to practice applying maggot dressings on mock patients, will learn what other dressing materials work well with maggot dressings, and learn how maggot debridement therapy (MDT) can be integrated successfully as an adjunct to conventional wound care. Attendees can also take a video tour of the Medical Maggot production facility.

Surgical Maggots - Lederle. From a 1934 JAMA advertisement
